- BatteryTender® characteristics
- 12 Volt @400 mA, 800mA, 1,2 A, 4A. 5A, and solar chargers.
 - Resists water vibration and shock, spark proof (when leads touch)
 - Reverse polarity protection (no charger or battery damage)
 - Temperature Compensation (for extreme weather conditions)
 - 72 hour safety timer (prevents damage to marginal batteries)

Explanation of Charging Terms: (4-Step Charging Program)

- QUALIFICATION Ensures safety by verifying battery status prior to charging.
- BULK CHARGE Constant current safely raises battery voltage to 14.4 Vdc. This is the recommended peak voltage (+ 0.2 Vdc depending on environmental temperature conditions). Microprocessor controlled charging assures the battery will not be overcharged.
- ABSORPTION CHARGE Holds voltage at 14.4 Vdc to ensure that current continues to fully charge the battery. Once the battery is only accepting 100mA of current, the voltage automatically drops to float / maintenance.
- FLOAT CHARGE Maintains fully charged battery at a safe constant 13.2 Vdc for maximum battery life!

Original BatteryTender accessories

If you own a vehicle that you do not use on a weekly basis and have experienced a dead battery **READ THIS!**

Most battery problems are self-inflicted and can easily be prevented by connecting to a Deltran Battery Tender® when the vehicle is not in use. A dead battery will spoil your day. There is nothing worse than getting on or into your prized possession turning the key and hearing that gut wrenching silence of a dead battery. The folks at Deltran call it the "click-click blues syndrome." Dead batteries can lead to all sorts of expensive problems, excessive load on the starter, insufficient voltage to operate the electronic ignition, divorce, and dog kicking. All your battery problems can be avoided if you simply connect your vehicle to a Deltran Battery Tender.

Our entire line of battery chargers are microprocessor controlled, designed to charge batteries to a 100% of their capacity then automatically switch to a float/maintenance mode. Face the facts, your battery will die at the most inconvenient time and usually the farthest point from home. Save yourself the aggravation; buy a Deltran Battery Tender and enjoy your time off worry free! If you want to ensure that your battery is always ready to go when you are keep it connected to a Deltran Battery Tender.

Frequently Asked Questions!

What is a Battery Tender charger?

A Battery Tender charger is a microprocessor controlled fully automatic charger/maintainer. It is designed to extend the life of any lead acid battery commonly used in automobiles, motorcycles, ATV's, personal watercraft, RV's, boats, airplanes, golf carts, back-up generator systems, etc. Any vehicle or battery operated piece of equipment not used on a daily or regular basis is a candidate for a Battery Tender charger. The advanced technology will bring the battery back to a full charge without overcharging and then float or maintain the battery for an indefinite period of time. All Battery Tender chargers come equipped with alligator clips and ring terminals for easy hook up!

Who should buy a Battery Tender charger?

Any person owning a vehicle not used on a daily or regular basis is a candidate for a Battery Tender charger! Batteries experience a natural self discharge of varying degrees. We calculate most lead acid batteries discharge at a rate of 1% per day when not in use. Many newer vehicles have internal systems that require electrical current while not in use to sustain memory and programming features. Thus, over time a battery will fully discharge. Whether it be a motorcycle, personal watercraft, ATV, trailer boat, classic car, performance vehicle, rider lawnmower or RV, a Battery Tender will assure that vehicle will be ready to go when you are! In addition, the number of people who have winter homes in different locations has increased dramatically over the years. They leave many vehicles in storage or unattended for a month or a season!

How often should I use a Battery Tender?

Any vehicle not used on a daily basis should be hooked up to a Battery Tender to ensure maximum battery life. No matter what time of the year it may be, plug in the Battery Tender when the vehicle is not in use! This will assure a healthy battery without sulphation or loss of reserve capacity.

How does the Battery Tender work?

Battery Tender technology is microprocessor controlled and fully automatic! It is a constant current charge program that does not shut off! After fully charging a battery, the voltage drops to a maintenance / float level at a very low current for an indefinite period of time. If the electronic draw on the vehicle pulls the battery voltage down from an optimum of 13.2V to 12.7V, The Battery Tender Will recognize this and automatically go back into a charge mode to keep the battery fully charged and ready to go.

Is Battery Tender® a quality brand?

Indeed the American, family-owned company Deltran Battery Tender® is well known for the development of trendsetting technologies since 1965 and cooperates with leading battery manufacturers. Only in the USA, the world's largest market for power sports products, approx. one million Battery Tender® chargers are sold annually. This brochure contains the list of products for the European market (CE-certified).
